

Maintenance and reliability of assets

2023

kept

Building a reliability management system

We use a comprehensive approach to achieve the best possible equipment performance. Reliable equipment operation is critical to safe, steady and cost-efficient running of an industrial company.

We work with leading IT suppliers to offer an integrated solution that is tailored to your organization and covers all the steps between maturity analysis and process automation.

Client benefits

Equipment accessibility and reliability ensured

Improved quality of M&R planning and performance

Growing efficiency of equipment and systems

Increased repair interval

Kept helps maximize asset performance and reliability. Our services cover the entire cycle of development of the asset reliability management system:

Assessment of the current state

- Assessment of the maintenance and repair (M&R) management system
- Operational audit
- Review of technologies applied
- Risk analysis in business processes of production and technical functions

Development of a target system

- Modeling of a target M&R and reliability management system
- Operating model of the reliability management function
- Cutting-edge technologies for equipment diagnosis and monitoring (vibration measurement and analysis, corrosion checks, etc.)

Implementation and support of changes

- Implementation of the target M&R and reliability management system
- Implementation of the risk-based approaches to M&R
- Transition from preventive to condition-based repairs
- Development and implementation of a technical policy
- Preparation of the asset management system for ISO 55001 certification

Why Kept

Our team has been certified by the world's leading technical education institutions in M&R and reliability management (University of Stuttgart, Marshall Institute)

We work with Russia's regions, national and international organizations, research centers, production companies, and government authorities

We use Kept proven methodology to implement a reliability-centered maintenance and repair management system and to improve operational and occupational risk management systems
